

My name is Cuneguines, and I have a master's in computer application and data science. Level 9.0 of NFQ

Prior to going to Ireland to work as an application support in a MOORE Environmental product written in VB and SQL, I started out as a web developer. I learned about ML models in computer vision while I was an intern at Aptagrim as a Data scientist. I obtained a wealth of knowledge and expertise using software development technologies including Python, PHP, CSS, and HTML in the energy industry while working as a research assistant at The International Energy Research Centre.

I have experience with machine learning methods in a range of BIM software packages.

I'm currently working on a machine learning research paper that I'm researching and analysing with unsupervised machine learning; the paper has yet to be published.

That's a summary of my experience.

Thank you very much.

Cuneguines
